EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Chris Conin on August 25, 2009.

The application has been amended as follows:

Claim 7 (currently amended): A method for revamping a combined system consisting of a blast furnace supplied with oxidizing fluid issuing at least partially from an air gas separation unit (ASU), wherein more than 50% of the flow from ~~the~~ a blower feeding the blast furnace before revamping is injected into a cryogenic air gas separation unit in order to produce oxygen with a purity above 90% by volume of O₂, a post-revamping blast furnace feed fluid consisting of pure oxygen or oxygen diluted with air produced by the cryogenic separation unit, said oxygen of purity above 90% by volume of O₂ being fed to the blast furnace in order to obtain over 90% by volume of ~~of~~ O₂ in the post-revamping blast furnace feed fluid, the blower air flow rate and/or pressure of the air issuing from the blower being controlled by a controller which measures this flow rate and/or pressure at the inlet and/or outlet of the air cleaning stage, placed upstream of the separation unit, in order to control the flow rate or pressure of the air issuing from the blower.

Claim 8 (currently amended): The method of claim 7, wherein the blower flow rate is controlled by a controller of which ~~the a~~ setpoint is calculated from the flow rate and/or pressure characteristics of at least one of the fluids produced by the ASU.

Claim 10 (currently amended): The method of claim 7, wherein the blower is controlled using a FIC controller of ~~the a~~ measurement and setpoint derive from one of the fluids produced by the ASU.

Claim 11 (currently amended): The method of claim 7, wherein the blower is controlled by a PIC controller of which the flow rate or pressure measurement and of which ~~the a~~ setpoint value are determined from the fluid entering the second compressor.

Claim 12 (currently amended): The method of claim 9, wherein the second compressor is controlled by a FIC controller, ~~the a~~ measured parameters and setpoint issuing from the flow rate and/or pressure measurement of the ASU.

The abstract has been amended as follows:

The invention relates to a method for renovating a combined system consisting of a blast furnace supplied with an oxidant fluid received at least partly from an air/gas separation unit (ASU). The ~~inventive~~ method consists in injecting, before renovation, at least 50 % of the flow rate of the blower feeding the blast furnace into an ASU ~~air/gas cryogenic separation unit in order to produce oxygen whose purity is greater than 90 % by volume of O₂ which feeds the blast furnace, in controlling the blower airflow rate and the pressure of the air derived therefrom by means of a regulator which measures said the flow rate and/or pressure at the input and/or output of a cleaning stage which is mounted upstream of the separation unit in such a way that to~~

control the flow rate and pressure of the air derived from the blower is ~~is controlled~~. The fluid feeding the blast furnace consists of pure oxygen or diluted by air produced by the cryogenic separation unit.

The drawings were received on 5/21/2009. These drawings are approved.

The following is an examiner's statement of reasons for allowance:

Drnevich et al, cited in the previous office action, teaches that the blast feed air portion has a concentration of 21-40 mol%. There is no basis to suggest over 90% of oxygen as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to TIMA M. MCGUTHRY-BANKS whose telephone number is (571)272-2744. The examiner can normally be reached on M-F 8:00 am - 4:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Roy King can be reached on (571) 272-1244. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
